

Planting 37 – Shabbona Savanna

This area has had the cherry trees removed and it has burned frequently and the weeds have been worked on (*Canabis sativa*, giant ragweed, great burdock, *Rubus*, etc.) and it has had native seed added to it over the years as well as an attempt at a savanna propagation garden (under the northern two bur oaks).

It is much more open now and some native plants were likely already present (bottle brush grass, silky rye, clear weed, giant hyssop, wingstem.)

Still having to mow parsnip and some burdock in 2001.
