

Planting #127

2018 Planting History

Prepared by Avery Parmiter

Name: Flagg/Lowden Corner

8.5 Acres Total

Dry: 6.2 Acres

Dry Mesic: 2.3 Acres

Step- In: ~1.0 Acres

Site Conditions

General Location – located in the SW corner of the intersection of Flagg and Lowden Road.

GPS: 41° 54'31" N, 89° 20'32"W Elevation: 728 ft – 755 ft

County: Ogle

Soil Types

According to the Web Soil Survey for the planting area, soil types include:

Soil Type	Acres of AOI	Percent of AOI
Jasper loam, 2 to 5 percent slopes	2.8	33%
Jasper loam, 5 to 10 percent slopes, eroded	2.9	34.4%
Rockton silt loam, 2 to 5 percent slopes	1.0	11.3%
Whalan loam, 5 to 10 percent slopes, eroded	0.7	7.9%
Wyanet silt loam, 2 to 5 percent slopes	1.1	13.3%
Totals for Area of Interest	8.5	100.0%

Figure 1: Soil types present in the planting. Source: NRCS.

*Above are basic descriptions, a complete soil test is needed to determine specific soil characteristics. For additional information, see Soil Web Survey website: <http://websoilsurvey.nrcs.usda.gov/app/>

Refer to the Figure 2 map that shows the location of soil types within the planting.

Topography

The general topography of the planting consists mainly of a dry hill that slopes down into a dry mesic, well-drained area. The elevation is lowest in the northwest corner and rises to its highest point along the south edge of the planting. There is an average slope of 5.1% and a maximum slope of 10%.

Agricultural History

This site has been farmed for a long time and had for sure been farmed since 1950 (see Figure 3). Dave Henry, the owner of this property before Nachusa Grasslands, noted that the site was in hay several years ago and then converted to row crop most recently. The site was in soybeans that were harvested right before planting.

Site Preparations

The soybeans were harvested in mid-October. The weather for the 2018 season was average, not unusually wet or dry, with the temperatures dropping into the 40's for planting in early November. This site was not harrowed and the seed was planted directly over the bean stubble.

Planting the Seed

Weather: The winds were variable from 5 to 15 mph. It stayed dry during planting and was cloudy or partly cloudy.

The area was seeded using three broadcast seeders that were connected to two blue UTV's and blue truck. The crew members who participated in pulling the seeders were Karey O'Brien, Nathaniel Weickert, Kim Elsenbroek, Avery Parmiter, Tyler Pellegrini and Tyler Berndt. The smaller "step-in" seed mixes were tossed out by hand.

Dry Seed Mix

A total of 6.2 acres were planted using the dry seed mix. It was planted with north-south transects as well as east-west transects mainly in the southeast area of the planting (see Figure 4). Each seeder was filled with two barrels of seed at a time and run until the seeders were empty and refilled if necessary. We used the edge of the planting as a turn-around spot, since the border would later be planted with Canada rye. This took a little over half of a day to plant. We planted this mix at 62.56 pounds per acre, which, for 6.2 acres, equaled a total of 387.88 pounds of dry seed mix planted.

Dry Mesic Seed Mix

A total of 2.3 acres were planted using the dry mesic seed mix. It was planted with north-south transects mainly in the northwest area of the planting (see Figure 4). The dry seed was planted before the dry mesic, so some of the dry mesic overlaps with the dry mix. We also added some combined seed to the dry mesic mix, which mainly consisted of asters and goldenrods. This took a few hours to plant. We planted this mix at 60.2 pounds per acre, which equaled a total of 138.46 pounds of dry mesic seed mix for the planting.

Step-In Seed Mix

About one acre was planted with the step-in seed mix. This mix contains seeds that were either collected in small quantities, have a specific habitat type, that are rare, or a combination of these factors. We did not want these seeds to get lost in some of the larger seed mixes. This took around 30 minutes to plant and the seeds were hand tossed.

Canada Rye Border

A Canada Rye border was planted from the edge of planting to about twenty feet in. We wanted the border to be heavy to help protect or "buffer" the planting, since it is in a location where it could be susceptible to non-native or weedy species. We planted six barrels of rye which equals about 120 pounds.

Woodland Mix

There is a woodland on the south edge of this planting that is owned by Nachusa. It contains a lot of understory growth, especially consisting of Japanese honeysuckle. We decided that it would be best to manage this area by brushmowing and treating the non-native species before planting. It could possibly be planted in the future.

Seed List

SCIENTIFIC NAME	COMMON NAME	lbs/acre	Dry Lbs	lbs/acre	Dry Mesic Lbs	Step-In Lbs	
Allium cernuum	Nodding onion	0.19	1.45	0.00			1.450
Amorpha canescens	Leadplant	5.27	39.49	0.00			39.490
