

Planting 26 – Barn Hilltop Circle Planting/Yellow House Site – Spring 1998

This small area had much white sweet clover and was herbicided in early spring 1998 and then planted with a rich forb mix. It was raked with harrow and then mowed twice during the summer of 1998.

It was also mowed during the summer of 1999 and weeds in it were monitored and removed (sweet clover, parsnip, mullein).

There is one large clump of Butterfly weed growing on the south edge before the area drops down into the old barn site (sandy). This was a small seedling planted in about 1997.

2001—looks good.
